Sleep is very important to human beings. An average person spends 220,000 hours of his life sleeping. Until about 30 years ago, no one knew much about sleep, although doctors and scientists have done research in sleep laboratories, they have learnt a great deal by studying people as they are sleeping, but there is still much that they don't understand. Sleeping is a biological need, but your brain never really sleeps. It is never actually blank. The things that were on your mind during the day are still there at night. They appear as dreams which people have discussed for years. Sometimes people believed that dreams had magical powers or that they could tell the future. You may have sweet dreams or nightmares.
